EDF Hydrostadium

Toulouse agency, recruitment team

Toulouse, November 2026

Subject: Apprenticeship application, electrotechnics / industrial engineering (ref. 2026-163825)

Dear Hiring Team,

I am applying for the three-year apprenticeship in electrotechnics at EDF Hydrostadium in Toulouse (ref. 2026-163825). As an apprentice engineer on the 3EA track (Electronics, Electrical Energy and Automation) at Toulouse INP-ENSEEIHT, I want to build real expertise in electrical power, and your work on alternators and excitation systems is exactly that.

My path has been built around electrical power. I started with a BTS in Electrotechnics at the CFAI de Beauzelle, then spent two years as an apprentice electrician at Cegelec Défense. There I wrote the calculation note for a 400 V three-phase supply (voltage drop, thermal stress, short-circuit current, selectivity) and took part in the electrical refurbishment of two work rooms, from study to commissioning. I am used to going from a calculation to a working installation, which is what your calculation notes and small repair jobs on alternators require.

Since September 2026, I have also been an apprentice in the high-voltage substation team at Schneider Electric. I analyse customer specifications, consult our factories and prepare technical and commercial offers. This taught me to write clear scope documents, to consult suppliers and to answer a tender, which matches your missions: drafting specifications, consulting companies, ordering and following up jobs, and responding to calls for tenders.

Before that, my NCO training in the French Air and Space Force gave me discipline and a sense of team, and I coach an under-10 rugby team every week, which taught me to explain things simply and to stay patient. These are the relational qualities and team spirit you ask for.

I know I would start from the basics of alternator expertise and excitation systems, and I am keen to learn from your experts, with the aim of running expertise jobs and projects on my own by the end of the three years. I am available for the next start date and would be glad to discuss my application with you.

Yours sincerely,

Gautier Bareille
